OPTIMA YELLOWTOP

OPTIMA YELLOWTOP™ Deep Cycle Batteries for Professional use

OPTIMA YellowTop is made to install and forget. No matter the conditions, be it dampness, heat, dirt or exposure to extremes in vibration or regular discharge, it is guaranteed to deliver uninterrupted power throughout the entire discharge cycle. The ability to hold a high charge during the discharge cycle makes it possible to utilize more of the stored power in the OPTIMA, compared to ordinary batteries. All of these benefits are due to OPTIMA's SpiralCell Technology®, which combines the advantages of a starting battery with those of a deep cycle battery. The YellowTop handles many discharges as well as re-charges without losing significant capacity and is also ideal for seasonal use because of its very low self-discharge rate.

POWER TO PERFORM

The OPTIMA YellowTop is the deep cycle battery that shows its true colours in a variety of professional environments. Farmers and contractors alike trust the YellowTop for fast, reliable starting power under the toughest conditions.
